WORK EXPERIENCE

Internshala

Gurugram, India

Software Development Engineer 1

Apr 2026 – Present

- **Architected** a fault-tolerant **RabbitMQ** event-driven architecture to asynchronously re-validate false-negative CCAvenue/Setu payment events, building a loosely-coupled, resilient system that eliminated **100% of transaction failures**.
- **Refactored** content recommendation engine into a clean, **modular microservice-style** architecture using OOP/LLD patterns (Factory, Strategy, Decorator), enabling new rule integration with zero cross-module side effects.
- **Engineered** scalable backend integrations for high-profile third-party vendor endpoints (Myntra, Tata, PepsiCo) across **3+ product verticals** in an agile, startup-like environment.

Associate Software Development Engineer

Mar 2025 – Mar 2026

- **Optimized** backend performance via **Atatus APM** profiling, targeted **MySQL** indexing, query consolidation, and **Redis** caching strategies on read-heavy endpoints, drastically cutting **p95 API latency**.
- **Redesigned Elasticsearch** data models with multi-filter pipelines (gender, degree, location) to improve distributed search precision and job discovery relevance at scale.
- **Built** a high-performance contextual job recommendation engine surfacing similar roles mid-apply, driving a **40% lift** in application completion rates.
- **Designed** an internal CMS with automated data pre-computation workflows, eliminating manual operational overhead for internal teams.

Software Development Engineer Intern

Sep 2024 – Feb 2025

- **Integrated** an AI observability layer into search for structured JD summaries and skill highlights; offloaded heavy aggregations to **async cron jobs** to stabilize high-throughput peak traffic.

RapidQuest

Remote

Software Development Engineer – Full Stack Intern

Jan 2024 – Apr 2024

- **Designed** and shipped a production-grade **RAG-powered application** platform using Python, Flask, LangChain, OpenAI API, and **MongoDB** vector embeddings as sole engineer, owning end-to-end architecture through production deployment.
- Deployed backend microservices via **AWS EC2** and implemented Nginx reverse proxy routing to ensure high availability..

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript (Node.js), Python, PHP
Backend & APIs:	Express.js, Flask, LangChain, REST APIs
Databases:	MySQL, PostgreSQL, MongoDB, Redis, SQLite
Search & Messaging:	Elasticsearch, RabbitMQ
Cloud & DevOps:	AWS (EC2, S3), Nginx, Docker, GitHub Actions
Frontend:	Next.js, React, TypeScript

PROJECTS

LLMScope - LLM Observability Backend & SDK

[GitHub](#) | [NPM](#)

TypeScript, Node.js, Express.js, PostgreSQL, Redis, Docker, Prometheus

- **Designed** a monorepo **observability stack** with a zero-dependency **TypeScript SDK** wrapping OpenAI, Anthropic, and Gemini APIs; fire-and-forget async transport with exponential backoff adds zero latency to the caller.
- **Built** an atomic **Redis** write-buffer with bulk-insert into **PostgreSQL** (up to **500 traces/cycle** under 5ms); hourly window functions pre-compute **p95/p99** rollups with re-queue on DB failure, ensuring high-availability data ingestion.

Real-Time Collaborative Text Editor

[GitHub](#) | [Live Demo](#)

Node.js, WebSockets, SQLite

- **Engineered** a custom **CRDT** (Fractional Indexing) for lock-free **distributed systems** state management with **sub-100ms sync**; delta-diff payloads minimized network overhead for high-concurrency environments.

EDUCATION

B.Tech, Computer Science and Engineering

University Institute of Technology RGPV, Bhopal

Jun 2024

CGPA: 8.05
